

WHAT HAPPENS TO ALL THE GARBAGE IN THE WORLD?

It ends up in dumps and landfills that get bigger and bigger all the time. Yuck! We can help solve the problem if we remember to **REDUCE** the amount of things we use that need to be thrown away, **REUSE** things over and over rather than buying more things that end up in the garbage, and **RECYCLE** old items such as newspaper, bottles, and cans so they can be created into new products again.
